1	PROCEEDINGS
2	(Atlanta, Fulton County, Georgia; August 5, 2020.)
3	THE COURT: Good afternoon. This is Judge Totenberg.
4	COURTROOM DEPUTY CLERK: Good afternoon, Judge. I
5	think we have everybody represented.
6	Would you like me to call the case?
7	THE COURT: Yes.
8	COURTROOM DEPUTY CLERK: Okay. Good afternoon,
9	everyone. We are here for the teleconference in the case of
10	Curling vs. Raffensperger, Civil Action Number 17-CV-2989.
11	For the State of Georgia, I have Vincent Russo, Carey
12	Miller, Bryan Tyson, Alexander Denton, Bryan Jacoutot, and Josh
13	Belinfante present.
14	Did I miss anybody?
15	COURT REPORTER: Loree Anne Paradise.
16	MS. LAROSS: Diane LaRoss is also present.
17	COURTROOM DEPUTY CLERK: I'm sorry. Say that name
18	again. Diane?
19	MS. LAROSS: LaRoss.
20	MS. PARADISE: Loree Anne Paradise.
21	COURTROOM DEPUTY CLERK: Loree Anne Paradise. Thank
22	you.
23	For Curling, I have David Cross, Adam Sparks, Halsey
24	Knapp.
25	Did I miss anybody for Curling?

1 MR. CROSS: No, sir. 2 COURTROOM DEPUTY CLERK: For the Coalition, I have 3 Robert McGuire and Bruce Brown. 4 Did I miss anybody for the Coalition? 5 MR. BROWN: I think that is it. Ms. Marks is also on 6 the line. 7 COURTROOM DEPUTY CLERK: And for Fulton County, I 8 have David Lowman and Cheryl Ringer. Did I get everybody for Fulton County? 9 10 MS. RINGER: Yes. That is correct. 11 THE COURT: All right. First of all, good afternoon. 12 And I hope everyone and your families are okay. I appreciate 13 your making yourselves available on such short notice. 14 I have to say I was speed reading the revised version of what the plaintiffs sent in -- and I'm sure defense counsel 15 16 were as well -- to try to really understand it and to 17 understand what were the differences from beforehand. 18 And I can't say that I completely necessarily 19 understand or have -- understand -- I understand the summary 20 and the plaintiffs saying that they are doing less and 21 describing it somewhat generically of what they are doing --2.2 what you are doing less. 23 But when I read it, what you provided, I can't say that it reads that way. And I don't think it will be 24 25 productive for me to go through every single item and try to

understand them.

2.2

But I would -- there are a few that would be helpful just to talk on this level and to understand what happened relative to the plaintiffs' efforts to previously observe the logic and accuracy noticed testing and plaintiffs said you were not able to do what -- even though publicly -- that there was a public notice of it.

Is that your representation to the Court?

MR. BROWN: Yes, Your Honor. This is Bruce Brown for the Coalition plaintiffs.

The experience that we have had with public observation has not been good. We have made efforts to both observe logic and accuracy testing and other operations that we believe the law requires public access to. And that has increased the need to seek some of this informal discovery through the notice to Fulton County.

That having been said, we do not -- we do not have a bad working relationship with Fulton County elections and would expect to be able to cooperate with Mr. Barron and the other officials there so that we can stay out of their way and -- but still observe what we need to observe in a meaningful manner and always respectful of not only their operational needs but, of course, you know, without any impact upon any voting.

In that respect, some of -- one of the requests at least or some of the request is not even -- would not even

be -- would be outside of their operations; instead would be the examination to be conducted at an office or a lab that

Mr. Barron would specify -- would cooperate with.

2.2

So that is the general -- general character of the request. And I'm referring to -- and just to be more specific, I'm referring to the notice of Rule 34 request to Fulton County that was attached --

THE COURT: Right. That is what I'm looking at.

MR. BROWN: -- most recently. Okay. Thanks.

THE COURT: Well, is there a need -- when I go and look at everyone's notices around the State, just trying to get a sense of this, many of the districts have already conducted their logic and accuracy testing. Now, maybe there is another round they are going to do.

But what is the -- what is left? You have a bunch of things for August. So what is actually left to be done from Fulton County's perspective for the --

MR. BROWN: Well, the logic and accuracy testing is one piece of it. But the other pieces would include, as we say in the Rule 34 request, to observe the operations comprising mail ballot scanning and processing activities, which like the others is public observation or at a minimum would be available for poll workers, and also access to the documents, which are as a matter of Georgia law public records. And we have been blocked at every juncture, whether it is Open Records Act,

requests through the statutory provisions relating to -specifically to elections, and also to physical observation of
voting activities to the point where our interns go down to a
voting location and basically have to come back because they
are not getting any meaningful access, can't see anything well
beyond the barrier that would be set up for public access. So
that is part of our -- part of our need here.

2.2

MS. RINGER: This is Cheryl Ringer on behalf of Fulton County. I cannot speak to the logic and accuracy testing. What I have learned from our staff is that there were some issues with interns. But I do believe our logic and accuracy testing has been completed at this point.

With respect to Open Records Act requests, that is something that is handled by a different person in our office. But I do know that there has been some issues in being able to compile the information in the time period that the requestors want it.

All that is required is that a notice is given with respect to when the information would be available and how much it is going to cost, if it is going to cost, within three days. You do not have to provide and compile that information within three days.

What has been the problem is we do have very limited permanent staff. And their time is being taken with preparing for elections. So Ms. Marks and individuals associated with

her would submit Open Records Act requests but were not able to get responses in the time that they thought they needed.

2.2

But, again, as we all know, Fulton County has been on the front lines of the newspaper. And we're very much concerned about conducting a good election. And so we have provided some time periods when some information would be made available. And I think that is not acceptable to them.

But there is also another process for going forward if there is an Open Records Act dispute. I don't think it is proper in this instance to come before the Court here.

THE COURT: All right. I'm just -- obviously I'm not trying to deal with the Open Records Act requests. I'm really trying to deal with whether it is done in 30 days or it is done in some other period of time -- the inspection request and what their scope is and trying to understand if there are some of these processes are open -- are public.

Is there -- I don't know -- I'm very clear that the logic and accuracy ones are. I don't know about some of the other ones that they are -- that the plaintiffs maintain are also handled on a public basis. And that's really what I was, first of all, trying to get at, not -- and being an inspection request. Because obviously it is so time-sensitive. It is related to the August elections. So that is next week.

So that is what I was trying to understand. So there is no more logic and accuracy testing, first of all, as I

```
understand, Ms. Burwell, what you are stating? That you have
 1
 2
     completed it?
 3
              MS. RINGER: Correct.
 4
               THE COURT: Okay. And then in terms of what happens
 5
     either on election day or beforehand or in the day afterwards
    or all of those days, is -- is there, in fact, the adjudication
 6
 7
     software accuracy and the team that determines how the
 8
     adjudication -- is that a public process?
 9
               MR. BROWN: Your Honor, this is Bruce Brown.
                                                             Under
10
    OCGA 21-2-483, it is very point-blank. It says all proceedings
11
    at the tabulating center and precinct shall be open to the view
12
    of the public.
13
               THE COURT: And does the -- does your client maintain
     that you -- that this was not available to you in June?
14
15
              MR. BROWN:
                          Yes.
16
               THE COURT: All right. And that you attempted to
17
    observe and you were not -- and representatives were not
18
     allowed to observe?
19
              MR. BROWN:
                          That is my understanding, Your Honor.
20
                           I'm sorry. You said OCGA 21-2-43 or --
               THE COURT:
21
               MR. BROWN:
                           I'm sorry. Yeah. You missed a digit or
22
     I did. 21-2-483 (b).
23
               THE COURT:
                           483. Okay.
24
               MR. BROWN: And then there is another provision about
25
    polling places.
```

```
1
               MS. RINGER: One second. For clarification, in June
 2
     I don't believe that we used the adjudication software. And
     I'm not even clear if that is going to be done this time.
 3
 4
     just clarification there. We could not have allowed you to see
 5
     something that did not occur in Fulton County.
               MR. BROWN: I stand corrected if that is the case.
 6
 7
     In terms of the -- I mean, our understanding is they did use
 8
     it. But the -- let me give you that citation -- those
     citations again first, 21-2-483.
 9
10
               THE COURT: (b). Yeah, I have that. I'm looking at
11
     it.
12
               MR. BROWN: And then there is another one.
13
     21-2-267, which has to do with polling places themselves.
               MS. RINGER: First, to clarify, at the warehouse the
14
    election -- what is it? -- the EPC, there is an area for the
15
16
    public to be and observe.
17
               Are you saying that your client was not allowed to be
18
     in that area?
19
               THE COURT: Are you talking -- chatting with your
20
     client to be able to respond?
               MR. BROWN: Yeah. I am trying to -- I had to move to
21
22
    my cell phone, Your Honor.
23
               THE COURT:
                          That is fine.
               MR. BROWN: A couple of things. On the logic and
24
25
    accuracy testing, it is going to be repeated for the upcoming
```

September elections when those start. That is the special election for John Lewis' seat. So that will be repeated. And we would expect to have the appropriate access to the logic and accuracy testing there.

2.2

And then with the August 11 election, the ones upcoming, there will be the election day observations that we are requesting but also the post-election work that is done with the mail ballot processing and things like that.

THE COURT: Well, that is what Ms. Burwell was asking was she was saying there is a public viewing area. Now, I don't know that -- she -- she maintained that there has been no use of the scanners and adjudication software accuracy. And I don't understand that. But that will need to be explained more.

But -- all right. Was there -- was your client blocked from being in the public access area and what were -- or were they there and they were not allowed to see? They were restricted in what they could see? I don't know which it is.

MR. BROWN: The typical scenario is that they are not, you know, excluded from the building. But they are in a room that is separate from, for example, the logic and accuracy testing. And so we might get close, but you can't see anything. And so it is a worthless enterprise.

And so that is what the situation was with the logic and accuracy testing for the August elections. And, frankly,

what we did see gave us grave certain that it was by action not being conducted and not being conducted properly. And it was being conducted at a speed that was impossible if it were sufficient under -- in any sort of general standards. And so it sort of increases our legitimate need for observation as to that.

And -- but I still want to emphasize that the last thing that we think will happen or that we want to do is to get in the way of anything. And that is why I think it is consistent with common sense and with the law just to simply allow meaningful public access but meaningful access by us so that we can inspect these operations as they are going on.

So it is authorized under Rule 34 clearly, which gives litigants broad powers. It is also authorized -- required by Georgia law. And then we will work, as we have in the past, with the elections people to make sure that they are comfortable with any aspect of this -- of these proceedings.

And, you know, typically when we have worked with them, they had a lot of success and we would expect that to continue. But it is not --

THE COURT: For instance, what I'm trying to understand is I don't -- is that you have this whole portion of the inspection which related to testing of mail ballot scanner and adjudication of software accuracy by plaintiffs' representative.

I mean -- this is a separate question of whether you are going to be able to test it yourself. But there is a whole inspection part of it and observation. And then Ms. Barwell -- Burwell -- excuse me -- says that they hadn't done any of this yet. And so I'm just trying to understand factually is -- and maybe the State's representative can say.

Is everyone, in fact, using this adjudication software, and is everyone using a mail ballot scanner at this point?

MR. TYSON: Your Honor, this is Bryan Tyson.

Ms. Ringer may have some better understanding of the specific situation in Fulton. But I believe that it is kind of county by county on the adjudication software.

Generally speaking, elections offices will have areas for public viewing. I represent Gwinnett in some other cases, and there is a designated area for the public to view the process.

I know in the past Ms. Marks has expressed disappointment with her ability to -- feeling that that is not sufficient. But, generally speaking, elections offices are aware of and have places for the public to observe. In addition, there are other things that poll watchers are able to observe either at the tabulation center or at -- being within the enclosed space of a precinct.

So I don't know if that necessarily gets to what you

are asking. But that is just a little more context that I have on that point for you.

2.2

adjudication software or not? I mean, my -- I mean, I hate to rely on public media reports itself. So I'm just asking. Has it made it available so that if they -- if there is a disagreement as to -- or it is not -- there is some question about how a ballot has been marked is there some sort of adjudication software, or is this being done basically by hand by the judgment of the individual members of the -- staff members of the election board?

I had the sense that there was some sort of -- a question of the adjudication software and how it was set. But, again, that is more based on my reference to public materials. So I can't say one way or the other that that is totally true.

MR. TYSON: Yes, Your Honor. This is Bryan Tyson. I may be able to clarify some of those points. So I think there is a couple of different things we're talking about here. And, again, Ms. Ringer may have some additional context.

First of all, as to ballots that are marked by hand, which is generally your absentee by mail ballots, there are settings on the scanning units about the sensitivity of what they count as a vote. And that is something that the EAC utilizes when they certify the machines. It is a setting that can be changed. It is a setting on there that as far as we

understand it is consistent across the State.

If there is a question about a voter intent after the scanner goes through it -- so it is not read by the scanner for some reason -- then there is a statutory process with the vote review panel that makes the determination.

My understanding of what Fulton had been discussing is possibly getting software that would additionally be able to assist in that initial vote review panel process versus the process of the -- versus the process of the initial scanning of the ballots. Those, I believe, are two different processes that we're talking about, as I understand them.

THE COURT: So the panel in Fulton would look at it before it was run through the machine? Is that what your understanding was?

MR. TYSON: Ms. Ringer, could you maybe clarify that point?

MS. RINGER: Yes. This is Ms. Ringer. I'm sorry. I do not know the specifics of the software that they are looking at.

Mr. Lowman, do you?

MR. LOWMAN: I do not.

MS. RINGER: I would have to defer to what Mr. Tyson has stated, Your Honor.

THE COURT: Okay.

MR. TYSON: Your Honor, I'm being advised by text

```
1
    message that most of the counties are using some sort of
 2
     adjudication software. So a lot of counties are using that.
 3
               THE COURT: So is the -- is there anticipation about
 4
    where the -- where will the vote review panel be meeting to
 5
     deal with adjudication and remaking of the ballots in Fulton
 6
     County on August 10 or through August 12 or whatever date it is
 7
     completed?
 8
               MR. BROWN: Was that a question to Ms. Ringer or --
 9
               THE COURT:
                           That really was a question to Ms. Burwell
10
     or whoever else is there with her who might be able to answer
11
     it.
12
               Ms. Burwell, were you able to hear me?
13
               MR. LOWMAN: Ms. Ringer just indicated to me that she
14
     dropped off and is trying to get back into the call.
15
               COURT REPORTER: Who was just speaking?
16
               MR. LOWMAN: This is David Lowman.
17
               COURT REPORTER:
                                Thank you, Mr. Lowman.
18
               MR. TYSON: Your Honor, this is Bryan Tyson.
19
    believe under 21-2-483 the vote review panel process takes
20
    place at the tabulation center, which includes the area that we
21
     discussed with an open view for the public. So under 483 -- I
2.2
     was looking through my code on that. I think that -- I believe
23
     that is where that process takes place.
24
               MS. RINGER: Hello. I'm sorry. This is Ms. Ringer.
25
               THE COURT:
                           That's all right.
```

MS. RINGER: My call had dropped. So I didn't know if the Court had addressed anything to me. I just called back in.

THE COURT: Thank you. I was asking you basically:
Would the vote review panel in its review of remaking of
ballots and adjudication issues, ballot marking be happening at
the tabulation center next week or is it going to be someplace
else.

MS. RINGER: So my understanding is that normally occurs at the -- at the warehouse. I would have to actually probably get more information on this. Because I believe that occurs at the warehouse. But this year, they are looking at using State Farm Arena for the tabulation center because of the space and the ability to social distance. So I -- I will have to get more information. I'll try and reach out to my client right now.

THE COURT: Okay. So what happened in June on this?

I mean, I'm just still trying to understand was -- you are saying there was not any use of the software at that point?

MS. RINGER: There was not.

THE COURT: And there wasn't --

MS. RINGER: That's correct. Fulton County did not use the adjudication software in June. But we always have a vote review panel. And so I was not clear if the plaintiffs were saying that they attempted to view the vote review panel

1 and were not able to do that. 2 THE COURT: Mr. Brown, what is the response to that? I actually do not know the answer to 3 MR. BROWN: that. I know that they are using the software -- that they did 4 5 not use the adjudication software in June but they are using it 6 in August. 7 And what -- remind me what it means when THE COURT: 8 it says Auditmark ballot images with color overlay. This is in 9 Item 4 of your request for inspection. 10 MR. BROWN: Your Honor, this is Bruce Brown. 11 McGuire is on the line. He's going to address the adjudicated 12 ballot image issue, which you also referenced in Paragraph 2 of 13 your order. And I also sent around -- although it was right as we were all getting on the phone -- a couple of images to 14 everyone just to sort of help guide that discussion. 15 16 So Rob? 17 MR. McGUIRE: Yes. Hello. 18 THE COURT: Hi. 19 MR. McGUIRE: Hi. Your Honor, good morning. Good 20 afternoon, I guess, there. 21 THE COURT: That is fine. I know it is morning 2.2 there. 23 MR. McGUIRE: So Bruce had emailed -- I'm not sure if 24 it has been filed on the docket yet. But he had emailed two 25 exhibits on the Auditmark and the overlays.

1 If you can -- if you have that, Exhibit 1 has an 2 image on it which shows --3 THE COURT: I don't know where -- you sent me a lot 4 of materials. Where -- does it have a document number? 5 MR. McGUIRE: Bruce, did it get filed? MR. BROWN: Yeah. It is getting filed now. 6 7 sent at one point to you, and I'm about to file it. 8 THE COURT: Okay. We haven't gotten an email. So --9 MR. BROWN: We sent it a little earlier, but you 10 would have been getting on the phone. 11 MR. McGUIRE: Well, I can explain it. A picture is 12 worth a thousand words. When it comes in, it will be clearer 13 maybe. But, hopefully, I can articulate it. 14 So the Auditmark is appended to the image of the scanned ballot. So when the scanned ballot comes in, you get 15 16 an electronic image of the ballot. Then at the bottom, it 17 appends something which says which votes were recorded. And to 18 the extent there has been adjudication through the software, it 19 appends as well what votes were adjudicated for who. 20 So you have on top the actual image that was scanned 21 of the ballot. And below it you have like a textual -- a text 2.2 listing of what votes were recorded. And the way -- that is going to be in Exhibit 1 when 23 Bruce's filing comes through. It is just a picture of the 24 25 Dominion manual guide, which has an image of that.

On Page -- on Exhibit 2, there is a scan or a photograph from the New York Times article, which looks at an actual on-screen capture of the adjudication software in operation. And what it shows is it shows a portion of the scanned ballot with several races on it where the person who is voting it has -- rather than done the right thing and filled in the bubble carefully like we are all taught to do, the person has actually done checkmarks.

2.2

And what that does is it doesn't fill in a high enough percentage of the bubble for the scanning software to be certain that there is a vote. So the scanning software registers above a certain threshold of marking within the circle as being a possible vote. And it flags — in this picture, there are two races that have yellow highlight of a candidate selected by checkmark. And there is a third race where there is no highlighting in yellow of the candidate selected by checkmark.

And the difference between those two situations is where there is no yellow highlighting there isn't enough of the checkmark in the circle for the software to even perceive an ambiguous vote. And where there is yellow highlighting, it means that the software has perceived there might be a vote. And the yellow highlighted overlay is put on to the -- the scanned image. And it demonstrates where the software has found ambiguity.

Then there's an additional overlay, which is a red square, which is around the selections which have been identified as being ambiguous but are then resolved by the vote review panel. So if the vote review panel looks at the ambiguous votes the software has identified and resolves them, there is a red square around that race as an additional overlay.

2.2

So what this image shows when you are able to look at it is that there are three equally obvious to the human eye votes by checkmarks for candidates. And the adjudication software has only identified two of them as being ambiguous, and it has completely disregarded the third.

And then the review board has adjudicated the two ambiguous votes, which any human looking at it would know they are definitely votes and would adjudicate them as votes. But what the adjudication software and the scanning software has done is they have missed a vote, which is to a human eye equally obvious that it is a vote.

And I think that is why this image made it into the New York Times article because it illustrates the problem with the adjudication software.

To Your Honor's point in your order that we address why we wanted to look at adjudicated ballot images for certain counties, we want to do that discovery. It is very easy for these counties to produce to us -- to ascertain the extent of

this problem of the adjudication software causing votes that are apparent to the naked eye to not be counted. And that -- those results will be recorded in the part of the Auditmark that is appended to each scanned ballot image.

2.2

And so because this is going to affect all the mail ballots that are scanned and it deals directly with votes not being counted that are required to be counted, we think it is very close to the heart of our claims. And the discovery is not burdensome for the counties that would be called upon to produce these records. And so that is why we included it in our list.

THE COURT: Well, I think it is straightforward. But I just sort of -- if you are talking about what the largest issues are for you -- I mean, I don't know that that is. I don't know that ever was identified in your complaint.

I'm not saying just because, you know, the entire -I mean, you had a very broad enough complaint. But I'm just
trying to -- I was trying to understand in the inspection what
you had in mind. Because you also have all sorts of things -I mean, just using this prototypically is that you want to be
able not just to observe it but you want to be able to
basically use the machine yourself and test it, if I understand
it.

And I'm really -- I don't want to become fixated on this except for the fact that it is sort of an easier thing to

be talking about. I mean, similarly, you want to be able to use a certain number of the ballot-marking devices and scanners and test them. And I don't -- you know, I don't know what that number is. I can't remember and if you identified it.

And I don't know what it means when you want to inspect and observe operations comprising the startup and operation of ballot-marking devices in particular precincts, including the inspection of all on-screen messages and displays.

Now, if that is something that's generally made public, that is one thing. You say you want to do this when no voter is using the specific ballot-marking device. So you mean when they are just setting up, or do you mean in the middle of the day? What do you mean?

I'm just trying to understand the intrusiveness of this as a whole and this notion also at points that testing is essentially that you are going to get -- have the machines yourself -- have access to them, they're being lent to you. I don't know what you have in mind.

MR. BROWN: Your Honor, this is Bruce Brown. What we are requesting is to be able to test the ballot scanner and the adjudication software because of the way it is not counting votes.

THE COURT: Well, here is the thing. When we had the first preliminary injunction hearing all that period back,

Dr. Halderman had a machine, his own equipment, that he testified about. And there were also other experts who had worked with -- who have given affidavits about their use and testing of particular equipment and technology.

So here though what you want is to take Fulton

County's or some other county's -- because there is one other

county that is mentioned. I don't know what particularly is

going on with that -- that one. I can't remember. It was some

county I hadn't -- there must have been something going on

with.

But you want to take their equipment and do testing with their equipment. And it is not like it is after the election. It is during -- basically in and about an election or between the August and November election obviously as soon as possible.

But, in fact -- because I really -- because of the expedited nature of your request, it sounds like it is within the next ten days virtually that you want to do it in terms of looking at these machines or perhaps before this election. I really don't know.

But that seems to me very challenging from the perspective of just, you know, both thinking about how to reasonably manage this and -- and also reasonably manage the election.

It is one thing for you to want to inspect and

observe operations. And it may be that there is nothing that really should prohibit you from -- your folks if they are -- you have one representative and you are actually totally not in the way. And that doesn't mean necessarily you just have to be confined to the public area. But that is very different than saying I want you to provide us with the same equipment or a sample of that same equipment on a time-sensitive basis.

Here I have -- even on the logic and accuracy testing, I understand why you want to inspect and copy the materials created when used in logic and accuracy testing for the August 11th election. And I assume that that is already available. But --

MR. BROWN: Your Honor?

THE COURT: Yes.

MR. BROWN: One thing is that the -- the type of examination that we ask for would be our access to equipment they are not using. It should not be burdensome, Number 1.

Number 2 --

THE COURT: How do we know there is excess equipment?

MR. BROWN: That is our understanding. Well, that is our understanding. I don't know for a fact.

But the other thing is this could be very helpful to Fulton County also. I mean, we are in the context of an adversarial proceeding. But I mean, the counties need to have some expertise looking at some of these software issues also

and would benefit from it. And they may not really oppose it, to tell you the truth.

2.2

THE COURT: Well -- and, you know, if they don't oppose it, that is fine and it can be informally worked out. But that is -- that is not what is in front of me at this point.

I mean, I understand that you could work out anything you wanted with them or they can work out anything with you-all. That is always an option available to the entities and to work with you and to get the benefit of some expertise that you may bring to it.

MS. RINGER: Your Honor, this is Cheryl Ringer for Fulton County. We do object with respect to the timing.

Again, we not only have this election; we have the September 29th election -- special election, and then the November election.

So the thought that we have the time to assist plaintiffs and, you know, stand by them and hold their hands as they do whatever testing -- one, we would object to testing because we don't know what that means. And that would possibly take machines that we need for our elections out of commission. And that is -- we don't have excess machines. Actually with the September election, we have had to order new machines because there is a limitation on ability to use machines within a 30-day period of time. And so I want to disabuse you of the

notion that we just have excess machines that plaintiffs can just have at.

MR. RUSSO: Your Honor, this is Vincent Russo. And although this request wasn't directed to the State, we would also object that it is not relevant to the claims or defenses in this case.

THE COURT: So the functioning of the standard is that at minimum -- the functioning indeed is -- I mean, some of this is. It is just simply that it is just very hard at the moment to see how some of this can happen. I mean, the observation of operations I can understand.

MR. TYSON: Your Honor, this is --

THE COURT: Go ahead.

2.2

MR. RUSSO: I'm sorry, Your Honor.

MR. TYSON: Go ahead, Vincent.

MR. RUSSO: Just respectfully, Your Honor, the claims in the Coalition plaintiffs' complaint are not that individuals who are voting by hand-marked paper ballots are having their fundamental right to vote burdened. It is that individuals who vote on the Dominion BMD system are having their fundamental right to vote burdened.

So this is almost the reverse of their claims. And their claims don't go to the standards. They go to the BMDs and whether the BMDs and the QR codes are burdening the right to vote of the voters.

THE COURT: What do the plaintiffs have to say about that?

2.2

MR. McGUIRE: Your Honor, this is Robert McGuire. I respectfully disagree with that because our complaint goes to whether -- certainly whether the BMDs, you know, violate the right to vote. But the State has all along asserted that the alternative to using a BMD, which makes them constitutional, is that people can vote by mail.

And to the extent that voting by mail exposes you to a differential risk that your vote is not going to be counted, this is squarely within the scope of our attack on BMDs. And we also -- we also are addressing in our first supplemental complaint for the Coalition plaintiffs to the Dominion voting system.

The BMDs are one of the most objectionable components. But the attack is on the whole system. And so if the scanners don't count votes, that is -- that is at the heart of our claims.

MR. RUSSO: Your Honor, I would just, you know, direct you to their -- their equal protection claim in Paragraphs 229 through 237 that that claim is clearly not what Mr. McGuire thinks it is.

The -- I realize we are talking about the Coalition plaintiffs and not the Curling plaintiffs. But I would note that the Curling plaintiffs wanted to use these scanners at one

point. I don't know if that is still their position or not.

But I know currently the fundamental right to vote claim in

Count 1 starting at Paragraph 221 of the complaint and the

equal protection claim is all that is left after Your Honor's

order last week.

2.2

And a reading of that does not indicate that this is about something larger than the BMD -- than the BMDs. And it is surely not about whether a hand-marked paper ballot is going to be treated worse than a BMD-voted paper ballot.

THE COURT: Well, you know, I don't know that I completely agree with either of your descriptions. But I understand the point. And I don't want to get lost on the question of the absentee ballot.

I would like to instead just focus in on the inspection and observation. Inspection and observation is one thing. Testing is another. And I just don't -- I think that the county could make accommodations for negotiating with the plaintiffs regarding actual inspection and observation because it is one whole -- there is a sort of seamless process in this.

But it is a different thing -- different thing to be talking about -- and I don't mean just as to the absentee ballot or the adjudicated. But it is a different thing for them to be asking to produce the machines for the plaintiffs to test. And that is sort of a theme about the inspection issues, whether -- I mean, I think the Poll Pads remain an issue. I

think that certainly was clearly identified as an issue.

And, you know, watching the operation of that is one thing again. But I'm not sure, for instance, in Paragraph 8 of this inspection report -- what it means. Inspect and observe operations comprising precinct opening and closing, including the production of all electronic or paper reports -- all right -- and inspection and copying of all precinct recap and Poll Pad reports as soon as they are available.

But is that really an inspection of the report, or are you -- is this just simply actually a request for the recap and Poll Pad report?

MR. BROWN: It could be viewed as either, Your Honor. I mean, certainly the reports could be subject to a document request as well.

THE COURT: So it seemed to me that a lot of what we -- there is a whole dimension of this inspection request under Rule 34 as -- really, it tucks in all sorts of actual requests for production. It is not just a -- it is not one -- just one thing. I want to inspect it, but then I want you to produce the reports.

And I'm not sure in all of these that you -- you say in Number 11 inspect and observe operations comprising ePulse (dashboard) election day reporting and monitoring function of the countywide deployed KnowInk Poll Pads -- Poll Pads at the Fulton County office where the monitoring software is installed

and digital printouts of all logs uploaded on election day.

2.2

Well, obviously the digital printout, are you looking for those beforehand? Are you looking for those afterwards?

And what are you actually inspecting and observing in Number 11 that you actually want to stand by and watch?

MR. BROWN: Your Honor, would it be helpful for us to -- this is Bruce Brown again for the Coalition. Would it be helpful for us in light of your observations about how this particular Rule 34 request (inaudible) some aspects of inspection under Rule 34 with documents under Rule 34(a), I guess, to streamline that and confer with Fulton County to see what we can agree on and what we can in light of your observations back off of or narrow? And then -- and then bring it back to you with a more streamlined and from your aspect more manageable sort of question?

everything. And that is what I was trying -- I realize I didn't give you a lot of time. But to me is -- I understand you want some amount of discovery so that you can go to a hearing and be productive. And I don't accept what the defendants are maintaining that you basically are not entitled to anything at all.

On the other hand, you know, you can serve whatever you want right now to get things moving. And I don't -- you know, I don't know whether -- but we're really talking about

what is expedited so that if you want to go to a hearing that you have something that you don't have right now.

2.2

And I just -- the variety of requests to basically produce the machines and the software and that you should -- and let your folks test it, you know, we went through a long -- obviously you still have the DRE information. And I think there is an agreement for identifying those machines. But that's not helpful right now to you because it is in the injunction, I gather, from what you think. Maybe it would be.

But I've got so much in front of me -- and I just used this as an example because it was more -- not because I thought it was necessarily the most salient issue. But this is so -- if I were running the election myself, which thank God I'm not, you know, it would be overwhelming.

The plaintiffs have a very legitimate interest in being able to vindicate the interest that they are seeking to vindicate in this matter. And I'm aware of that obviously.

But I can't basically say that this is giving me a roadmap for saying, all right, these are the five, ten things that have to happen so that you can at least productively proceed to a hearing. But instead what happened when I asked this question was I got more. I got so much detail. And I appreciate maybe you were trying to clarify what you were looking at. But it would -- it is overwhelming.

And yes, the plaintiffs are correct that you don't

really get meaningful relief if all this comes with an election -- with a challenge in January and that you are pragmatically oriented in affecting ultimately the November election and that there would be integrity of the election process. But all the more important to be able to focus on what are the biggest issues that you have that also relate to the complaint.

2.2

And I don't think that is what I have in front of me.

I remain -- you know, I think it would be more important,

frankly, for you to serve your actual -- your discovery right

now, just to begin the time frame, and then actually identify

again something that is more straightforward and narrow as to

what are the essential things that you need right now.

But when you -- even you are wanting to take even the depositions requested, even though you have narrowed it, they are pretty exhaustive. And they also come with all sorts of document requests or information associated with them.

And it is true, of course, that lots of information was collected over the litigation through Open Records Act requests over time. And you probably have been unable to get as much productive responses because of the state of the COVID world. And I recognize that. But that is where we're at.

So the bottom line is that I'm not averse to approving something that was narrowly tailored and important for purposes of proceeding here so that you can go to a hearing

and I could schedule one and I would understand that this is a productive encounter, if I need to have a hearing.

But I don't -- what I have in front of me would sink a ship at this point. It doesn't necessarily sink a ship at all for purposes of long-term discovery. But it would for having to be turned around in the time frames that we have got here.

So I would basically go back to where I was when I issued the order earlier this morning. I think if the plaintiffs come up with something that is closer to what I could approve, even if I were not to exactly approve it as submitted, then that is one thing.

But I can't even parse it. I just can't parse it at this point. I spent a lot of time on it last night at midnight and this morning. And I just can't -- normally I can say, oh, this and this and this, how about that? But I can't even do that now.

MR. CROSS: Your Honor, this is David Cross. Could I just jump in for a moment?

THE COURT: Yes.

MR. CROSS: Just so I understand Your Honor's position, we served on Monday eight document requests that we did try to keep narrowly tailored.

Did you look at those and you feel that those were too broad as well?

1 THE COURT: Yes. 2 MR. CROSS: Okay. Well, you know, perhaps not necessarily. 3 THE COURT: 4 I didn't even try to look at it from this perspective for long -- for the -- you know, if you were doing discovery over a 5 6 longer period of time. 7 But the notion of expedited discovery in this context 8 when the defendants also have to manage the election has to be 9 more streamlined than that. And yes, I spent time on that and 10 then I spent time on this second round. 11 MR. CROSS: Okay. We will certainly take another 12 crack at that. 13 One other specific question: One of the things that we would like to begin right away is forensic examination of 14 the memory cards that we received from the three counties. 15 16 Since Dr. Halderman already has those, there is no burden or 17 expense to the State for that. 18 But I am aware that when they were produced I think 19 the order said that they were produced solely for the sampling. 20 Is that something that we could get permission to proceed with 21 now? THE COURT: 22 So what you want to do is now get those 23 particular machines? Is that what you are saying? No, Your Honor. It is two different 24 MR. CROSS: 25 steps. He has -- I'm sorry. I wasn't clear.

He has memory cards from Fulton, Cobb, and Dekalb.

The only thing he has done with those cards so far was just to test to see whether he could match up machines with elections because that was the limited purpose for which he got those.

What he hasn't done and what we would like to do is a full forensic examination of the memory cards because the memory cards themselves can be contaminated such as by hacking software. And since he has those, we would like for him to -- and discovery is open, we would like for him to just be able to go ahead and do a full forensic examination of those memory cards. That is the ask.

Separate and apart from that, we would like to do a forensic examination of certain machines. But that is a separate issue. The only thing I'm asking at the moment is whether he can begin a full analysis of the memory cards he already has.

MR. TYSON: Your Honor, this is Bryan Tyson. I think this is an illustration of exactly the point. I don't think we are averse to a forensic examination of the memory cards and the DREs. But this needs to be served as a request.

The whole point of the memory cards initially was for preservation purposes only. And if we're going to be going into the forensic analysis of things, we need to have experts agree to a testing protocol, we need to have a way to work through this.

And I think we can do that on a normal discovery track as opposed to immediately beginning a forensic -forensic process on memory cards before we have had a chance to work through any kind of the pieces. I know Your Honor's order previously had required us to have a new 26(f) conference within ten days after the denial of the motions to dismiss.

The plaintiffs have offered tomorrow and Monday. Monday is our tenth day -- or I guess the tenth day is on Sunday -- the 11th day.

2.2

So, again, I think this just emphasizes where we can just begin the normal discovery process here as opposed to just throwing open the door to full forensic examinations right off the bat.

MR. CROSS: Your Honor, this is David Cross. If I could just briefly. I guess I'm not sure I understand the objection. The cards are no longer used. They are for machines that are no longer used.

My understanding is that they are set to be destroyed at some point. They are already in our possession. I'm not sure I follow the idea that we have to have a testing protocol. The parties routinely produce data and other things in cases to experts. And the experts are free to do their analysis. In fact, their analysis is privileged. It is not discoverable under the Federal Rules under Rule 26, except at the end of the day where they reach conclusions and they disclose what they

relied on.

2.2

So the cards are there. I don't understand why we wouldn't be able to proceed with a forensic analysis and at some point prepare a report. This seems perfect for expedited discovery.

MR. TYSON: Your Honor, this is Bryan Tyson.

MR. CROSS: What Mr. Tyson is proposing actually adds a lot of cost and delay. What we're saying is let's just get off to the races with no imposition on them at all.

MR. TYSON: Your Honor, this is Bryan Tyson again on that point. I think that it is important to remember that the point of the memory cards was to try to identify the sample for preservation. And there were a number of provisions in that order regarding use of a write blocker and our ability to observe the process and those other things that occurred related to preservation only.

If we're going to have now a full forensic analysis -- I believe the order requires the cards to be returned to the counties as soon as Dr. Halderman had finished his analysis. But if we're going to do this, that is fine. We can get to a point where we do that. But we need to have some sort of agreement about how we're going to go about testing equipment that belongs to the State when -- before we are just giving Dr. Halderman unfettered access.

I expect we will be at a point where we are going to

1 conduct a full forensic analysis of DREs and memory cards.

- 2 But, again, that is just a process we need to work through.
- 3 And that is better in the course of normal discovery than it is
- 4 | in the -- in an expedited context when there is no kind of --
- 5 | and I understand Mr. Cross believes it is narrowly tailored.
- 6 But throwing the doors wide open without any sort of process or
- 7 | structure around it we don't believe is the right way to
- 8 approach it.
- 9 Serve the discovery request. We'll work through it
- 10 and go from there.
- 11 THE COURT: Well, tell me this, Mr. Cross: How are
- 12 | you thinking you are going to use this for purposes of a
- 13 | preliminary injunction hearing? Let's say it shows something
- 14 | that is adverse to the State. This is just an assumption.
- 15 | Something that looks like it -- that would be consistent with
- 16 | your -- the finding -- the contentions earlier that there had
- 17 been an intrusion into the system and that there was a virus
- 18 | into the system or something like that or that that data had
- 19 been manipulated in some form.
- 20 How do you -- what is your thought at this juncture
- 21 of how all that would relate to the preliminary injunction
- 22 | hearing in particular?
- 23 And I know that is just theoretical at this point.
- 24 | But how would you imagine the forensic evaluation of the cards
- 25 | will end up relating to the preliminary injunction hearing to

the extent that -- assuming I have one?

2.2

MR. CROSS: Yes, Your Honor. This is David Cross. I mean, let's imagine a scenario where Dr. Halderman finds some indications that there was hacking on these memory cards, something to suggest that somehow they were contaminated through each of the vulnerabilities that Logan Lamb found or some other way. We think that would be critically important to bring to the Court's attention with respect to the relief we're seeking before the election, in part because what we are also trying to investigate on an expedited basis and then long term is the degree to which contamination from the prior system may have spilled over to the new system. And there's —

THE COURT: I understand. So how would it -- what do you think -- I guess my question is -- and I always have understood that.

But how would the memory cards in particular reflect that?

MR. CROSS: Oh, my understanding from Dr. Halderman is the memory cards are one potential penetration point. They are also a transmission point. And so -- I think you said a hypothetical. Let's take a hypothetical.

Let's say that someone was able to infect the election system through the vulnerability that Logan Lamb found and it made its way to a GEMS server. If that contamination is sitting on the GEMS server at the time that they program the

memory cards, which are then used to make the ballot definitions -- there can be other things on the DREs -- then that contamination can get out to some, many, or all of the DREs. And Dr. Halderman thinks that it may be possible to see that on the memory cards.

Now, admittedly it may not. Dr. Halderman has always been the first to emphasize that oftentimes hacking of this sophistication may not leave a trail. But the memory cards would be a starting place to at least look as to whether there may be some indications of contamination in the system. That is the idea.

THE COURT: All right. Well, why don't you do this. Why don't you go ahead --

MR. CROSS: We have --

2.2

THE COURT: Yes. Go ahead.

MR. CROSS: We have served a request on this. It is in the requests we served on August 3rd. It is the request for inspection Number 1. So they have it.

MR. RUSSO: Your Honor, this is Vincent Russo. I would just point out that Dr. Coomer testified at the last hearing and talked about the new Dominion system and all the new components.

And plaintiffs' counsel had questions and asked questions of Dr. Coomer at that time that established that nothing from the old system has gone over into the new system.

In fact, even the ballot-building was done by hand at this time.

2.2

So to the extent there was ever any -- any malware that could have been on a memory card, at this juncture there's -- there would have been no way for it to have gotten on the new system, to begin with, which is what Dr. Coomer has already testified to.

THE COURT: I can't remember what Dr. Coomer's position was.

MR. RUSSO: He was -- he was with Dominion or is with Dominion. And Dr. Coomer indicated that everything that was done had been -- there is air gapping. There was no new or no old -- excuse me -- memory cards from the old system used in the new system. The flash cards are all -- are all brand-new and had been cleaned.

And the real piece was with the ballot-building because there was this thought that, I believe, Dr. Halderman had mentioned at one point that maybe through GEMS and through that ballot-building process the old ballot styles would somehow be used and that file would carry over from GEMS into the new system. And that was the -- that was the big link.

But as Dr. Coomer testified to at the hearing, all the ballot-building process was done by hand. So there actually were no files that were transferred.

MR. CROSS: Your Honor, this is David Cross. Just

two quick responses. One, we didn't actually get a chance to cross-examine Dr. Coomer. That was a point that the other side emphasized throughout.

2.2

More importantly to the second point, recall that we heard for two years in this case that the original system was air gapped. That proved to be untrue. Recall that we heard for two years that there were no vulnerabilities found in this system. The Fortalice reports revealed that to be untrue. There was testimony from Mr. Beaver that proved to be misleading at best.

So I am not saying this to cast dispersions. It is to justify the discovery. While I appreciate that Mr. Russo certainly believes what he is saying, discovery is needed to figure out whether the representations that have been made are, in fact, accurate and reliable. And I think there is a --

THE COURT: And I understand that. But I'm just trying to link up how will the cards -- I mean, if you are -- if you are trying to -- you have a certain number of jelly beans here for expedited discovery. How are the cards going to get you to that, I mean, in terms of you want that -- to be able to do that on an expedited basis? I'm not clear about that.

If that is what you want to pursue and you think it will and there is a direct line -- but if this -- I think you have to basically sort of think about it. You have got a

certain amount of -- I'm saying I will on a narrow basis -- on some sort of tailored basis allow something to be expedited.

Is this what you are really going to want to use your chips for though?

MR. CROSS: Your Honor, I guess the way I think about it is: The issue that we have addressed with expedited discovery is the burden on defendants, which we completely appreciate. And that is why we'll go back and narrow down the document requests that we sent because that imposes a burden and expense on defendants.

The one thing we're talking about now, these memory cards, does not impose a burden on them. Dr. Halderman has them. It will not take any of their time or money to let him do what routinely happens in cases, to simply take what he has got and to analyze them.

And I do think it is one of the richest sets of discovery essentially, depending on what he can find. And it would also, Your Honor, again position us to a point you have made before that we don't want to have to have them preserve more DREs and other things than we need. We don't want a bigger sample than we need.

Being able to do a forensic analysis of the memory cards -- if he finds, for example, indications of concern on particular memory cards, we now know that he can link those cards to specific machines and specific elections. And so then

a sample becomes very focused and targeted.

So it is a perfect initial step to let us further narrow and focus discovery later. And, again, it is only on us.

MR. RUSSO: Your Honor --

THE COURT: All right. Well, you-all -- you-all have -- you can all have a normal discovery conference about it. It is something I'm willing to consider. It is a burden on the State. I understand it wasn't the original purpose. If that is something -- I realize though everything that takes time, even though you don't think this will take their time -- if there is some protocol that they are going to want you to consider, then you have got to talk about it.

But it is not why -- I understand both perspectives. I don't think it is a burden. But I -- I'm not prepared today to go through all of this. I would say that you need to have -- you really need to sit down and talk.

And I realize you won't be sitting down together except electronically. But you need to talk about it and do that in the next two days or on Monday and just tee it up so that I can actually make a proper decision. Okay?

Because I'm not -- I mean, your going back and forth now is not going to add anything. I understand the points made by Mr. Cross. I understand some of the points made by Mr. Russo. And -- but it doesn't seem to me unbridgeable.

Some of the other things seem much more challenging than that.

2.2

And the other thing I would say is if, in fact, the plaintiffs have some capacity to actually communicate effectively with Fulton County about some of these observation issues, that is something -- rather than just sending this onward, if it is something you-all can agree upon as to closer observation of some matters that is not disruptive and that you are not -- I mean, I don't know who are the interns. But, you know, you are using somebody who has some -- some amount of judgment in the way that they are handling whatever the observation duties. That is something reasonable to manage.

If you can't actually wherever your position see anything -- I mean, the observation -- but the requests go beyond observation. If the plaintiffs believe that the software is inherently -- there is an inherent problem, I mean, you are capable obviously of getting your hands on some of this equipment independently. So I mean, that is what has been done in the past.

So -- and I encourage you-all to have another -- even as frustrating as it is, if the plaintiffs have another -- a very streamlined version of what you want in expedited discovery, then I would encourage you to talk about it.

If you can't get anywhere, then, of course, I'm going to decide it. But no, I didn't see -- I wasn't -- the world didn't get illuminated between the first version and what was

said to me later.

MR. CROSS: Your Honor, this is David Cross. We certainly apologize for that.

One procedural question. As I read the defendants' response last Friday, they want to respond to requests in the ordinary course of 30 days. I guess the question is: What should be the procedure for us to try to narrow this down? Because we can get out refined discovery requests, I think, by tomorrow to them narrowed from what we sent earlier. We maybe can get them out tonight.

But if they are not going to respond for 30 days, I'm not sure how we tee this up for Your Honor to figure out what is expedited discovery if we can't agree ourselves.

How should we deal with that?

THE COURT: You basically need to have your 26(f) conference about it right away. And I will decide if you can't agree on what is to be expedited and what is going to be in the normal schedule. It may be a 25-day schedule or a 20-day schedule. Or it will be a 30-day schedule.

It just simply -- I'm just looking for something that would be -- that -- I mean, I'm not going to wait for their response 30 days later just to determine that something should be expedited. But I can't --

MR. CROSS: Thank you, Your Honor.

THE COURT: -- predict this. So --

1 MR. CROSS: Okay. 2 THE COURT: That is the issue. And I certainly don't want too much time to go by either. If you are going to be 3 4 able to get it out tomorrow, then hopefully you can basically 5 present the issue to me at least by Friday so I can make a 6 decision and get something out to you by Monday. 7 MR. CROSS: Understood. Thank you, Your Honor. 8 THE COURT: That is if you can't agree. 9 All right. I mean, just returning to the observation 10 and production issues with Fulton County, I mean, it may be 11 useful to actually discuss what they can -- with Fulton 12 County's counsel what is really doable and what is not -- doing 13 it separately not just having a general conversation between 14 all defense counsel and plaintiffs. 15 And what was the story with the other county that you 16 asked for information about? What was that -- what county was 17 that? 18 MR. BROWN: Your Honor, we served a -- well, we are 19 serving a subpoena on Athens-Clarke County.

THE COURT: Yeah. Not that one. That was a different county that you -- Lanier -- I'm just looking for -it was the last item in the request at some point. I don't It wasn't Athens-Clarke County though.

MR. TYSON: Your Honor, this is Bryan Tyson. I think you are referring to 752, Page 5, Irwin County. There was a

```
1
     list, among other counties, that the plaintiffs had
 2
     originally -- and I think in their revised version they said
 3
     they will plan to serve on some nonparty counties. They didn't
 4
     specify particular ones in the revised one, unless I missed it.
 5
               THE COURT: Okay. All right. I'll look to hear
 6
     whether anything gets resolved or not and urge you-all to talk
7
     some more too. Very good.
               MR. BROWN: Thank you, Your Honor.
 8
 9
               THE COURT:
                           Thank you.
10
               MR. CROSS:
                           Thank you.
11
               MR. TYSON:
                           Thank you, Your Honor.
12
               THE COURT:
                           Thank you.
13
                     (The proceedings were thereby concluded at 2:41
                     P.M.)
